

Electrical Conductivity Redefined

The specialists in graphite and layered materials of **H.C. Carbon** GmbH succeeded in dramatically improving an already excellent product:

MECHANO-COND® 1D5 New

The proven aqueous graphite dispersion for conductivity applications achieves new peak values thanks to an improvement in our FLG* technology.

The electrical conductivity of MECHANO-COND® 1D5 almost doubled.

The formulation containing no carbon nano tubes or hazardous substances has not been changed. MECHANO-COND® 1D5 New can be formulated as usual. Product parameters are unchanged. Our application technology team will be happy to offer advise. Do not hesitate to ask for samples.

*) FLG = Few Layer Graphite Technology für teildelaminierten Graphit
